

Dr. Michael Drosner

"I like my Ellipse as it covers most of the treatments my patients ask for: beginning with hair removal (even on skin type VI) or pigment correction.

I use my Ellipse for all kinds of vascular indications using the PR or VL applicator or the Nd:YAG hand piece. This powerful Nd:YAG is able to erase tiny red telangiectasia as well as large venous lakes. More recently I found out that different fat disorders like xanthelasma* or seborrhoic gland hypertrophy* also are easy to treat with the Nd:YAG.

My co-operation with Ellipse dates back to 2000 and I can't remember a single breakdown of the systems I have used during these 14 years."

EXCELLENT RETURN ON INVESTMENT

A fast return on investment is ensured not only by the wide range of treatments offered, but higher patient turnover is also made possible by faster, more comfortable treatments from applicators with large spot-sizes.

Running costs are low and with no hidden ownership costs. A one year Time Licence allows you to fire limitless shots in the first year at no extra expense. And the system is supported by one of the best warranty packages in the industry.

Ellipse clinical intelligence assists diagnosis, thus ensuring a shorter learning curve.

Nordlys combines an automatic self-test with a modular design to keep downtime to a minimum.

Key Features

- Sub-millisecond pulses
- Selective Waveband Technology
- Moveable screen
- Quick treatments
- Easy to delegate
- Very low noise level
- Easy view of treatment area
- Nd:YAG with SoftCool™ treats vascular lesions and onychomycosis
- 2 connected lightweight applicators
- Fewer shots per treatment with large footprints
- Hair removal for all skin types

INDICATIONS FOR USE

- | | | | |
|-------------------------------|-------------------------------|-----------------------------------|---|
| • Benign Vascular Lesions | • Venous Lakes | • PDT enhanced Photo Rejuvenation | • Rosacea |
| • Inflammatory Acne | • Onychomycosis | • PDT enhanced Acne Vulgaris | • Skin Texture |
| • Photo Rejuvenation | • Epidermal Pigmented lesions | • Port Wine Stain | • Leg Vessels and Leg Telangiectasias |
| • Hair Removal Skin Types 1-6 | • Poikiloderma of Civatte | • Resistant Port Wine Stain | • Facial Telangiectasias and Facial Reticular Veins |

MORE THAN LIGHT

THE MOST VERSATILE AND EFFECTIVE SYSTEM ON THE MARKET.

Ever since Ellipse was founded in 1997 our vision has been to create the world's best system for treating vascular and epidermal pigmented lesions as well as hair removal. This vision has guided us throughout the years, and we are constantly perfecting the technology and expanding the usability of the system.

With the introduction of Nordlys, we have once again pushed the boundaries for what is possible to achieve with just one system. Never has a system been faster, more effective and versatile. The introduction of the new and truly unique sub-millisecond pulses allows you to treat lesions not previously possible to treat.

We would like to welcome you into the world of Ellipse – where perfection, technical superiority, quality and long-term partnership meet.

Jacob Kildegaard Larsen. CEO Ellipse A/S.

MORE THAN LIGHT

WIDE RANGE OF TREATMENTS
FEWER SHOTS PER TREATMENT
EFFICIENT TREATMENTS
2 CONNECTED APPLICATORS

EASY TO USE
FREEDOM FOR EXPERTS
PERFECT MEMORY
EASY TO DELEGATE

SUB-MILLISECOND PULSES
SELECTIVE WAVEBAND TECHNOLOGY
LESS PAIN
ALL SKINTYPES

QUIET MACHINE
MOVEABLE SCREEN
FLEXIBLE & LIGHT APPLICATORS
EASY VIEW OF TREATMENT AREA

THE MOST VERSATILE SYSTEM EVER

Enhanced treatment possibilities.

Ellipse proudly introduces Nordlys – the most versatile platform ever produced, and the ultimate choice for treating vascular and pigmented lesions as well as hair removal.

Using both laser and Selective Waveband Technology (SWT), Nordlys by Ellipse allows you to meet patients' increasing demands for aesthetic and dermatologic procedures with a single, versatile machine, thus increasing your return on investment while minimizing office space used.

With the introduction of new and unique sub-millisecond pulses, Ellipse has reset the limitations on treatments, allowing doctors to further expand treatment possibilities such as micro-telangiectasia and pink (residual) port wine stains.

The 6 unique SWT applicators along with the Nd:YAG are approved for 17 intended uses and offer fast and effective treatments. For example, an entire back can be treated with the HRL 600 applicator in less than 10 minutes.

All treatments and results are thoroughly documented in clinical articles. Thousands of users and millions of treatments around the world prove that Ellipse is the world's most effective system for treating vascular and pigmented lesions as well as hair removal.

Applicator Colour	Applicator Name	Treatment Wavelength
Red	HR 600	(600-950 nm)
Red	HRL 600	(600-950 nm / large areas)
Red	HRD 645	(645-950 nm)
Yellow	VL 555	(555-950 nm)
Yellow	PR 530	(530-750 nm)
Blue	PL 400	(400-720 nm)
Black	Nd:YAG	(1064 nm with adjustable spot size)

COMPLEX TREATMENTS MADE SAFE AND SIMPLE

Experience gained from millions of treatments makes Nordlys safer and simpler to use.

There is no need to learn to program or to apply complex formulae. With Nordlys you simply select the treatment, the patient's skin type, suntan, vessel or hair thickness or vessel colour.

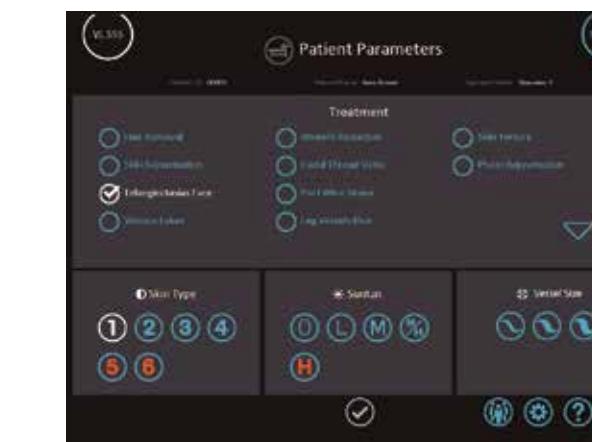

The built-in clinical intelligence will then provide a safe and effective starting point as Nordlys comes with a pre-set range of aesthetic and dermatological treatments that have been developed over more than 17 years. The experience gained from millions of treatments was fed back to Ellipse to further optimise settings, as you see them today.

A built-in patient database stores all client and treatment data, so delegating treatments has never been as safe or as easy.

For expert users, Nordlys offers unsurpassed flexibility to further push the limits of what is possible, allowing users to define every individual pulse or pulse train. And with sub-millisecond pulses there is nothing stopping you from achieving astonishing results in the future.

Sub-millisecond pulses enable treatment of even smaller vessels and Nordlys Nd:YAG applicator is supported by the patented and built-in SoftCool™ technology, which cools the skin but does not constrict the vessels being treated.

Unique Ellipse clinical intelligence ensures effective treatment and reduces the risk of side effects. Nordlys chooses the appropriate settings based on the operator's evaluation of patient parameters and automatically adjusts the spot size, energy level and pulse length.

UNIQUE TECHNOLOGY AND SCIENCE BEHIND NORDLYS

Give your patients more comfortable, less painful and faster treatments while you achieve excellent results.

The Ellipse Nordlys continues the high standards that have placed the Ellipse brand at the forefront since 1997.

Selective Waveband Technology combined with perfect Square Pulse Technology, enables Ellipse to treat skin types 1 to 6, and effectively eliminates the need for active skin cooling. The result is safer, more predictable and effective treatments that minimise pain and downtime as well as enhancing patient comfort.

Ellipse has always led the way in vascular treatments, but with Nordlys the best just got even better.

Sub-millisecond pulses enable treatment of even smaller vessels and Nordlys Nd:YAG applicator is supported by the patented and built-in SoftCool™ technology, which cools the skin but does not constrict the vessels being treated.

Unique Ellipse clinical intelligence ensures effective treatment and reduces the risk of side effects. Nordlys chooses the appropriate settings based on the operator's evaluation of patient parameters and automatically adjusts the spot size, energy level and pulse length.

THE MOST OPERATOR-FRIENDLY SYSTEM EVER

Comfortable to work with for you and your colleagues.

Ellipse is at the forefront, not only in terms of technology and clinical results, but also with ergonomics. With its truly novel design Ellipse has once again reached new heights in terms of putting the operator in focus.

With the new flexible arm you always have the touchscreen and the accessory tray right at your fingertips, enabling you to easily and comfortably change settings without having to move around, and any additional accessories are always right where you need them.

A calm working environment is essential, so Ellipse has created the most silent system on the market – both during and between treatments.

Two lightweight applicators each give a clear view of the treatment area and are attached to Nordlys with a flexible cable that reduces the risk of repetitive strain injury. Applicators can even be changed while the system is running.
