

GEO SCADA

GEO SCADA provides a desktop solution combining mapping technology with classic supervisory control and data acquisition. For operations with geographically dispersed assets, ICONICS GEO SCADA Solution offers real-time, scalable and secure visualization. Water plants, building facilities, factories, oil fields, and renewable energy applications will benefit from GEO SCADA. Tracking movable assets during transportation via GPS coordinates is also supported by GEO SCADA.

ICONICS' unique SmartPin technology allows for an intuitive drill-down capability to quickly view alarm conditions and status for any location around the world. Within seconds, asset performance, issues, or alarm conditions can be identified and located through integration with Microsoft's Bing Maps.

Features

Windows 7 Bing
Maps.....

Smart
Pins.....

Unified View of Real-time Metrics and
Historical Data.....

Benefits

Out of the box solution integrates standard operating systems, mapping and SCADA technologies.

Helps with Asset Management Tracking.
Displays all production sites, maintenance and critical events independently from their source. In an easy-to-navigate, drill-down interface, interact with one single centralized virtual map to make quick and efficient decisions anywhere in the world.

Enable better decision making by providing immediate access to key business information.
