

The *MW Coding Process* is in essence an optimisation of parameters in the whole recording chain from recording to mastering. It will present to you a CD/SACD with a wide dynamic range, precise sound stage and localization and smoothness comparable to a 24-bit master with the lowest jitter possible over the complete frequency range. It will give you a perfect combination of the exactness of digital with the character of analogue. STS digital has developed the *MW Coding Process* for the benefit of the professionals in audio as well as for the advanced audiophile listener. We sincerely hope you will enjoy this process and the capabilities of our *MW Coding Process*.
