

**AC-301**  
**Standalone RFID Access Controller with keypad input**  
**user manual**

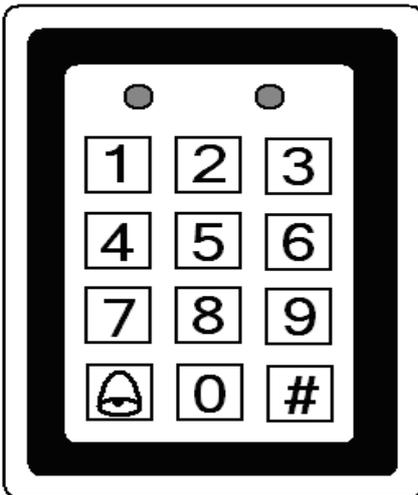

Back light keypad

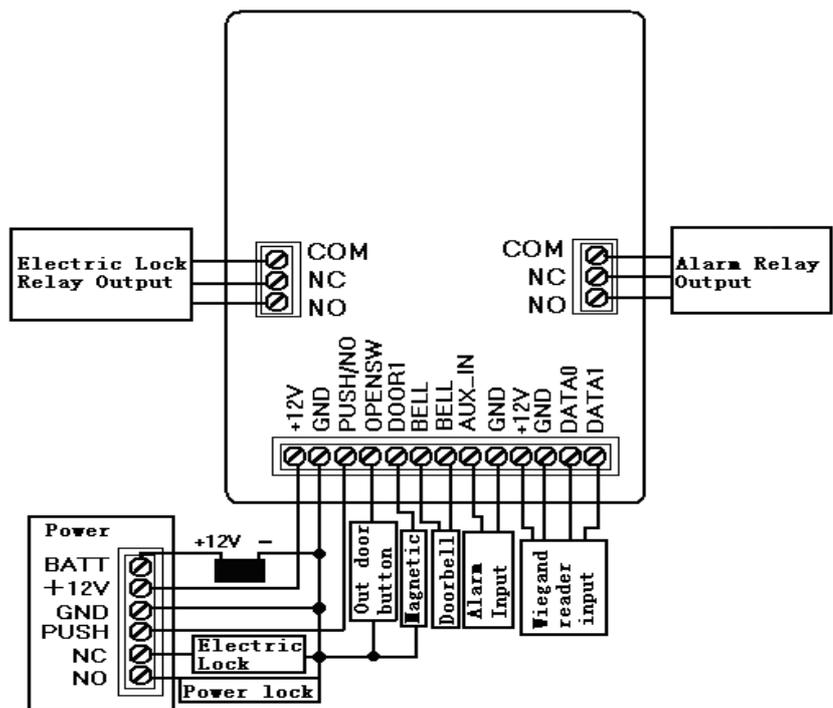

Anti-theft button

Access Controller positive

Access Controller on the back of Wiring Diagram

Force to restore factory programmed Password:  
 after release short J2 legs

## Specification

|  |  |
|--|--|
| <b>Material</b>                              | Steel metal shell with blue back light keypad        |
| <b>Power Supply</b>                          | +12VDC / 1.2A  |
| <b>Door relay power</b>                      | +12VDC / 2A  |
| <b>RFID Card ID storage</b>                  | 1000 pcs   |
| <b>Password</b>                              | Universal Keypad password : 1<br>PIN password : 1000 |
| <b>Built-in RFID reader support protocol</b> | 125Khz EM4100 or compatible card                     |
| <b>RFID card reading range</b>               | ~5-10 cm   |
| <b>Door relay control output</b>             | 1  |
| <b>Doorbell button input</b>                 | 1  |
| <b>Door sensor input</b>                     | 1  |
| <b>External alarm output</b>                 | 1  |
| <b>External RFID reader support</b>          | 1 – Weigand 26 bit interface                         |
| <b>Size</b>                                  | (75x115x28)mm  |
| <b>Weight</b>                                | 0.5Kg  |
| <b>Operation temperature</b>                 | 0'-45'C  |
| <b>Relative humidity</b>                     | 40%-90%RH  |

## Factory default setting

|                                      |  |
|--------------------------------------|--|
| <b>Programming password</b>          | 881122   |
| <b>Door open mode</b>                | card or Universal Keypad password (default : 1234) |
| <b>Valid card PIN password</b>       | 0000   |
| <b>unlock time</b>                   | 3 seconds  |
| <b>Anti-theft Alarm</b>              | off  |
| <b>Door lock Alarm</b>               | off  |
| <b>Door lock status detection</b>    | off  |
| <b>Alarm delay</b>                   | 0 second   |
| <b>password modification feature</b> | off  |

## Sound and LED function

### Normal working mode

- valid command : a short beep sound
- Invalid command : a beep sound
- Red LED keep flash

### Programming mode:

- Green LED keep on continuously
- valid command : "du-du" = 2 beep sound
- invalid command : "du-du-du" = 3 beep sound

press [#] to exit programming mode

## Programming mode - function and setting description

|                                    |  |
|------------------------------------|--|
| <b>Access programming mode</b>     | <b>press [#] + [6 digit password (default 881122) ]</b><br>→ "du-du" sound → enter programming mode (Green LED on)   |
| <b>modify programming password</b> | <b>press [0] + [Enter 6 digit new programming password] + [re-type new 6 digit programming password]</b>   |
| <b>Add valid RFID card</b>         | <b>press [5] + [Enter 3 digit card code] "du-du" → [place RFID card 1 to read] "du,du-du" + [place RFID card card 2 to read] "du, du-du" + ... .. + [n RFID card ] "du,du-du" → press [#] "du du" to complete</b><br><b>Remarks 1</b><br><b>[3 digit card code] :</b> 001--- 999 number can not be repeated. It is used to delete the card after it is lost.<br><b>Remarks 2</b><br>When continuous set valid card, each card code will be added +1 increment automatically.<br>For example, input card code is 015, the next card will 016 ...017 ..017 |
| <b>Delete valid RFID card</b>      | <b>Method 1</b><br><b>Press [7] + [Enter 3 digit card code 1] "du-du" + [Enter 3 digit card code 2] "du-du" + ... + [Enter 3 digit card code 3] "du-du" ...</b><br>→ press [#] "du-du" to complete<br><b>Method 2</b><br>Press [7] + [place RFID card 1 to read] "du,du-du" + [place RFID card 2] "du,du-du" + ... .. + [place RFID card N] "du,du-du" → press [#]"du-du" to complete and exit<br><b>Method 3</b><br>Delete all cards : restore factory default settings<br><b>Remarks :</b><br>card ID and password will be deleted at the same time    |
| <b>Exit programming mode</b>       | <b>Press [#] "du-du"</b>   |

|                                  |  |
|----------------------------------|--|
| <b>Keypad Password</b>           | <p><b>Default keypad password is "1234"</b></p> <p><b>Default card + PIN password is "0000"</b></p> <p><b>Press [1] + [2]</b> "du-du" (default)<br/>- disable change PIN password unction</p> <p><b>Press [1] + [3]</b> "du-du" – enable change PIN function</p> <p><b>Modify card PIN code</b><br/>under non-programmed mode → press [#] (long by up to more than 2 seconds)<br/>if "du-du-du" that mean change PIN password feature is disable ,you can't change the PIN password<br/>(need enable it by Press [1] + [3] under programming mode)<br/>if "du-du" that mean enter change PIN password mode<br/>+ [place RFID card] "du,du-du"<br/>+ [Enter 4 digit original PIN] (default 0000) "du-du"<br/>+ [Enter 4 digit new PIN]<br/>+ [re-type 4 digit new PIN] "du-du"</p> <p><b>modify keypad access code :</b><br/><b>press [3] + [4 digit keypad access code]</b> (default 1234)<br/>Under "card or PIN password mode" , the password is invalid if the keypad access code or the PIN password is "0000"</p> |
| <b>Door Access mode</b>          | <p><b>Press [1] + [0]</b> "du-du: (default) – card or PIN code</p> <p><b>Press [1] + [1]</b> "du-du" – card + PIN password</p>   |
| <b>Door relay open period</b>    | <b>Press [2] + [TT]</b> – if TT = 03 , that mean 3 seconds   |
| <b>Anti-theft alarm</b>          | <p><b>Press [4] + [0]</b> – disable function (default)</p> <p><b>Press [4] + [1]</b> – enable function<br/>(alarm will be on if the controller case is open by force)</p>  |
| <b>Door lock status</b>          | <p><b>Press [6] + [0]</b> – disable function</p> <p><b>Press [6] + [1]</b> – enable function<br/>- make sure the door is open by normal card or PIN access</p>   |
| <b>Door sensor alarm</b>         | <p><b>Press [8] + [0]</b> – disable function</p> <p><b>Press [8] + [1]</b> – enable function</p>   |
| <b>Alarm active delay period</b> | <p><b>Press [82] + [TT]</b><br/>"TT" is alarm delay period (e.g TT=03 = 3 seconds)<br/>Alarm will be on if reach delay time</p>  |
| <b>Factory default setting</b>   | <b>Press [86]</b> "du-du" , "du-du-du" , 5 seconds "du-du-du" → completed  |
| <b>Access method</b>             | <p><b>Card or keypad password :</b><br/><b>Enter keypad password (default 1234) or read a registered RFID card</b><br/>press [#] to exit or cancel password input</p> <p><b>Card + PIN password :</b><br/>[reads valid RFID card] "du-du"+ [PIN password] to opens the door<br/>If enter incorrect PIN password , press [#] to re-input correct PIN password directly</p>  |
| <b>Set to factory setting</b>    | Short J2 on the reader PCB board   |
| <b>Alarm output active</b>       | <ol style="list-style-type: none"> <li>1. AUX_IN electric pin active Low</li> <li>2. anti–theft function is enable</li> <li>3. door sensor is enable</li> </ol>  |

## Frequently questions

| Symptom   | Reason and Solution   |
|---|---|
| Press key is normal, does not read the card : open/close door, "du-du..." 8 beep sounds | Not enough power supply current<br>- Change to high power supply  |
| Press key is normal, short reading distance or can't read card                          | The controller near metal surface<br>- change the installation position<br>Not enough power supply current<br>- Change to high power supply   |
| Can read the card , "du-du" but can't open door lock                                    | " card + PIN password" mode is enable<br>1. change to " card or PIN password" mode<br>2. Before reading the card, pressed [#] the key - waited for 5 seconds then read the card again |
| Can read the card , "du" but can't open door lock                                       | Door sensor alarm – enable<br>- door already opened , check door status   |
| Press [#] + [programming password] , can't enter programming mode                       | Pressed other keys before pressed [#]<br>- press [#] again until heard a long beep sound then press [#] + [programming password] again  |
| Press [#] , "du" can't change PIN password  | Pressed other keys before pressed [#]<br>- press [#] again until heard a long beep sound then press [#] 2 seconds "du,du-du" → okey   |
| Press [5] "du-du-du" 3 sounds   | Controller's card ID storage memory full  |
| Press [5] + [3 digit code] "du-du-du"   | This code was already used.<br>Press [5] + [3 digit codes] to use another code  |
| Press [5] + [3 digit code] "du-du" + [RFID card] "du-du-du"                             | The card already be a valid card.<br>need assign this code to another RFID card   |
| under programming mode the controller will exit and return to working mode              | Under programming mode , If No command input within 20 second , the system will return to normal operation mode   |
